### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The present invention is directed to an image compositing apparatus that composites images together into a final composite image, the images including a video image and a plurality of graphical images. Each independent claim identifies the uniquely distinct features: "wherein the image compositing order indicates a first overlaying order of the images, the composition coefficients are  $\alpha$  values, each of which indicates a composition ratio of one of the images to a composite of the image with images below the image in the first overlaying order, and the calculating unit calculates the composition ratio of the video image to the final composite image from  $\alpha$  values of the video image and images above the video image in the first overlaying order; switching unit for two adjacent images in the first overlaying order to rearrange the images in a second overlaying order; and updating unit for updating  $\alpha$  values of the switched two adjacent images so that results of compositing in the first and second overlaying orders are the same, wherein the first compositing unit generates the composite graphical image, the calculating unit calculates the composition ratio of the video image to the final composite image, and the second compositing unit composites the frames with the composite graphical image using the second overlaying order the updated  $\alpha$  values". All the references of record, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
